SEMINAR

Almost all finite graphs are asymmetric

SPEAKER : **Kübra Dölaslan**

DATE : **15 March, 2019**

TIME : **13:30**

PLACE : **Çankaya University (Central Campus), R-213**

After preliminary definitions and lemmas about graphs and automorphisms, we will talk about the probability of finding a finite graph that has a nontrivial automorphism group; then prove that this probability is zero as number of vertices grow.

This talk depends on an article by Ali Nesin in Matematik Dunyasi.

All interested are cordially invited.

ADDRESS : **Eskişehir Yolu 29.km, 06810, Etimesgut/ANKARA**
